

# Main Procedures and Cost Estimate

## 1. Egg donation

- The patient is prescribed BCP in order to synchronize the patient's cycle with donors' cycle. (This process takes approximately 30-40 days).
- Once the donor starts stimulation – patient stops BCP and begins prescription for preparing endometrium (18-20 days before the ET)
- Patient will have two ultrasounds and completes all necessary lab work during this process. This should be supported by local doctors/insurance.
- Patient and partner fly to the clinic. They arrive two days prior to egg retrieval from the donor. Partner will provide a sample, after 5-days, fresh transfer is performed and, in most cases, the patient is free to travel back home the next day.

*Male partners may arrive at the clinic to provide a frozen sperm sample in advance. Generally, one visit requires 2-3 days. Frozen sperm shipment is also available (the cost of a transfer varies from \$3.000 up to \$5.000 depending on a courier type)*

Included:

| Medical part:  | Non medical  | Timing   |

2. *Own Eggs IVF Program( fresh/frozen transfer)*

- Patient and partner fly to the clinic one day prior to treatment beginning. (Arrival 1-day)
  - Stimulation (medication injections). (12-days)
  - Egg retrieval procedure ( OPU) and partner sample collection (1-day)
  - Cultivation of embryos (5-days)
  - Fresh transfer of 5 day embryos procedure (1-day)
- Overall timing - 20 days

*PGT-a and frozen ET splits the procedure for 2 parts*

*Visit 1 - 14 days for the stimulation and OPU*

*Visit 2 - 2-3 days for frozen ET (timeframes and logistics see in the Frozen Embryo transfer program)*

Included:

| Medical part   | Non medical   | Timing   |
|--|---|--|
| Initial consultation (video)<br>Medical treatment plan,<br>medical support by email till 5<br>weeks of pregnancy;<br>Monitorings<br>OPU<br>Fresh/frozen sperm<br>fertilization<br>IVF/ICSI<br>Cultivation<br>Embryo freezing<br>Embryo storage*<br>Defreezing (in case of frozen<br>ET)<br>One embryo transfer ( fresh<br>or frozen)<br>Lab works* | Documents, visa support<br>Airfare*<br>Accommodation**<br>Transfer<br>Lesures<br>Personal patient coordinator<br>Home and travel support 24/7 | 20 days ( fresh embryo<br>transfer)<br><br>2-3 days (frozen embryo<br>transfer, non medical part for<br>the second visit is counted<br>individually) |

*Medications are not included at any program.*

3. *Frozen Embryo Transfer Programs*

- From the 1st day of any menstrual cycle ( if existed) the Patient starts preparing for endometrium according to the protocol.
- Patient will be scheduled with one ultrasound and completes all necessary lab work during this process (depends on the clinic) This part should be supported by local doctors/insurance.
- Patient flies to the clinic one two days before the scheduled ET. In most cases, the patient is free to travel back home the same or the next day after ET.

Frozen ET in frames of previously performed IVF or Egg donation program is free of charge.

Repeated Frozen ET is calculated individually.

4. *Postponed Maternity( for young ladies under 35y.o ; or before chemo & radiotherapy)*

Step 1

- Arrival - 2 days prior the beginning of the cycle
- Stimulation (medication injections) (12-days)
- Egg retrieval procedure ( OPU) and partner sample collection (1-day)

Step 2

- Cultivation of embryos (5-days)
- Embryo transfer of 5 day embryos procedure (1-day)

*PGT-a and frozen ET splits the procedure for 2 parts*

*- 14 days for the stimulation and OPU*

*- 2-3 days for frozen ET (timeframes and logistics see in the Frozen Embryo transfer program)*
